See additional note 7 below.

- 1 Coal capacity accounts for the 2019 conversion of coal-fueled Muskogee units 4 and 5 to natural gas and the 2019 acquisition of the River Valley facility
- 2 Gas capacity accounts for the 2019 conversion of coal-fueled Muskogee units 4 and 5 to natural gas, the 2019 acquisition of the Frontier facility, and the 2018 addition of natural gas-fueled combustion turbines at the Mustang Energy Center
- 3 Solar capacity and generation includes the Mustang Energy Center (online in late 2016) the Covington Solar Farm (online in 2018) and the Choctaw and Chickasaw Nations' faciliites (online in 2020)

4 - Note that emissions from power purchased from the Southwest Power Pool (SPP) Integrated Marketplace and OG&E-owned and operated facilities should not be combined. The SPP Integrated Marketplace functions as a centralized dispatch, where market participants

throughout a 14-state region in the central United States, including OG&E, submit offers to sell power to the SPP from their resources and bid to purchase power from the SPP for their customers. The SPP Integrated Marketplace is intended to allow the SPP to optimize supply offers and demand bids based upon reliability and economic considerations and to determine which generating units will run at any given time for maximum cost-effectiveness within the SPP area. As a result, the generating units OG&E owns and operates produce output that is different from OG&E's customer consumption. Therefore, the emission profile for the generating units OG&E owns and operates and has wind PPAs with is different than the emission profile for electricity consumed by OG&E's customers.

- 5 2019 and 2020 actual emissions reflect the addition of SO2 emission control equipment at the Sooner facility and the conversion of Muskogee units 4 and 5 to natural gas
- 6 In 2016, OG&E installed mercury emission monitoring systems
- 7 Non-consumptive use reflects the retirement of legacy gas boiler units and the 2018 addition of natural gas-fueled combustion turbines at the Mustang Energy Center
- 8 Employee age ranges as of 12/31/2020: under 30 = 234; ages 30-50 = 1223; over 50 = 841
- 9 In 2021, River Valley became OG&E's third power plant to enter an agreement to have its Fly Ash reused in road base construction and cement production.
- 10 Implemented 100 percent deployment of smart meters with OG&E SmartHours<sup>TM</sup> program. The program enables and empowers customers to manage their usage, reducing annual capacity and energy demand on the grid and avoiding the associated emissions.
